

## Machine Print Spool Locks Up When Printing Vector Graphics

August 5, 2015

Sharp Technical Tip 080415\_1

**Models:** AR-M350N/AR-M450N

**Symptom:** When printing an Adobe® PDF file, the machine would print about four pages and then lockup indicating, "Rendering."

**Cause:** Driver is set for printing vector graphics.

**Solution:** In the print driver, under the Advanced Tab, select "raster" from the drop-down list. This allows the printer to print the file without decrypting the vector graphics.
